

COURIER MANAGEMENT SYSTEM(CMS)

8. PROJECT DEMONSTRATION PHASE

8.1 Project Demonstration

The **Project Demonstration Phase** is the final stage where the completed Courier Management System is presented to users, faculty members, and evaluators.

Objectives:

- Demonstrate the working of the system.
- Explain the major features and modules.
- Show the complete courier workflow.
- Present the project results.
- Collect feedback for future improvements.

8.2 Demonstration Preparation

Before the demonstration, the project team should ensure that:

- The application is running correctly.
- All required modules are completed.
- Test data is available.
- Login credentials are ready.
- Important screenshots are prepared.
- The database is properly connected.
- All major features have been tested.
- The presentation and project explanation are ready.

8.3 Project Introduction

During the demonstration, briefly explain:

Project Title: Courier Management System

Purpose:

To provide a centralized platform for managing courier shipments, customers, delivery agents, tracking, invoices, notifications, and reports.

Main Users:

- Customer
- Admin/Staff
- Delivery Agent
- Branch Manager

8.4 Login and User Authentication

Demonstrate the login process.

Steps:

1. Open the Courier Management System.
2. Enter username/email and password.
3. Click the Login button.
4. Verify user authentication.
5. Show the appropriate dashboard.

Expected Result:

Only authorized users should be able to access the system.

8.5 Customer Management

Demonstrate customer management.

Features:

- Add new customer.
- View customer details.
- Update customer information.
- Search customer records.
- Manage customer accounts.

Expected Result:

Customer information should be stored and displayed correctly.

8.6 Shipment Booking

Demonstrate how a new shipment is created.

Steps:

1. Select **Shipment Booking**.

2. Enter sender details.
3. Enter receiver details.
4. Enter parcel information.
5. Enter pickup and delivery details.
6. Confirm the booking.

Expected Result:

A unique shipment/tracking ID should be generated and the shipment should be saved successfully.

8.7 Delivery Agent Assignment

Demonstrate the assignment process.

Steps:

1. Open the shipment details.
2. Select an available delivery agent.
3. Check agent availability/workload.
4. Assign the shipment.
5. Save the assignment.

Expected Result:

The shipment should be assigned to the selected delivery agent and appear in the agent's delivery list.

8.8 Shipment Tracking

Demonstrate shipment tracking using the tracking ID.

Shipment status examples:

Booked → Picked Up → In Transit → Out for Delivery → Delivered

Expected Result:

Customers and staff should be able to view the latest shipment status.

8.9 Real-Time Status Updates

Demonstrate how the delivery agent updates shipment status.

Example:

- Agent receives parcel → **Picked Up**

- Parcel moves to destination → **In Transit**
- Agent starts delivery → **Out for Delivery**
- Customer receives parcel → **Delivered**

Expected Result:

The updated status should be stored and displayed to the relevant users.

8.10 Invoice Generation

Demonstrate invoice generation after shipment booking or delivery.

Invoice may contain:

- Invoice number.
- Customer details.
- Shipment/tracking ID.
- Parcel details.
- Delivery information.
- Courier charges.
- Payment details.
- Total amount.

Expected Result:

The system should generate an accurate invoice.

8.11 Notifications

Demonstrate customer notifications.

Examples:

- Shipment booked.
- Parcel picked up.
- Shipment in transit.
- Out for delivery.
- Successfully delivered.

Expected Result:

Customers should receive timely information about their shipment.

8.12 Reports and Dashboard

Demonstrate the administrator/manager dashboard.

Dashboard can display:

- Total shipments.
- Delivered shipments.
- Pending shipments.
- Delayed shipments.
- Active delivery agents.
- Revenue information.
- Branch performance.

Purpose:

Reports and dashboards help managers monitor courier operations and make informed decisions.

8.13 Complete Workflow Demonstration

Show the complete process:

8.14 Project Results

The demonstration should highlight the results achieved:

- Faster shipment management.
- Easy parcel tracking.
- Reduced manual work.
- Better delivery agent management.
- Timely customer notifications.
- Accurate invoice generation.
- Improved branch coordination.
- Easy access to reports.
- Better customer communication.

8.15 Demo Feedback

After demonstrating the system, feedback can be collected from users and evaluators.

Feedback areas:

- Ease of use.
- System performance.
- Tracking experience.
- Interface design.
- Required additional features.
- Problems or improvements suggested by users.

The feedback can be used for future system enhancements.
